

Energy Poverty Mitigation Policy Actions - Portugal -

Context

- This factsheet showcases the main policy actions included as part of the national energy poverty mitigation roadmap of **Portugal**. Following an extensive co-creation process, this roadmap consists of a list of priority actions which should be carried out within Portugal in order to mitigate energy poverty effectively. The actions have been developed based on a thorough stakeholder mapping, vision exercises and are coupled with individual indicator sets per action. The main policy actions are briefly presented in this factsheet while their full details as well as the complete roadmaps, can be accessed via the POWERPOOR website [here](#).
- The aim of the national roadmaps is to build on the project's activities and to enable the application of the POWERPOOR approach to promoting integrated energy poverty mitigation policies across all regional and cities within the POWERPOOR countries. The roadmaps include a circular methodology which encourages the uptake and revision of the identified actions following the project's lifetime.

The roadmaps are the result of coordination with many relevant stakeholders. These include representatives from local and/or regional authorities, housing providers, social workers, health practitioners, experts on alternative financing schemes, representatives from energy communities, civil society as well as other stakeholders linked to energy planning as well as academia.

powerpoor.eu

POWERPOOR works on the ground with energy-poor households & policymakers on lowering energy poverty levels, funded by Horizon 2020 & run by 14 motivated partners across the EU.

The POWERPOOR project has received funding from the European Union's Horizon 2020 Research and Innovation Programme under grant agreement No 890437.
